DIGITAL OPERATING MODELS

Knowing what aspects of digital will add real value to your organisation is difficult but can be achieved - our approach ensures that the operating models we develop aren't just left on the shelf but embedded into the fabric of decision-making, from identifying areas of strategic investment to how to deploy resources in the most efficient and effective way.

CONNECTED WORKFORCE

Technology today allows information to be accessed and created at the point of need. This allows for a more informed workforce who are able to access information as and when required. We have a range of experience designing and implementing operating models to deliver a mobile, connected workforce ensuring consistency and guaranteeing the data presented is accurate, relevant and secure.

CULTURE & UPSKILLING

An effective digital platform requires a culture to be established that embraces digital capability. We have worked with clients within the UK and overseas to establish digital culture and leadership structures which champion digital transformation and move organisations to more data-centric models.

DATA ANALYTICS & INFOSEC

Data can be both a multiplier to efficiency and effectiveness and a tangible risk to operations. We have a wealth of experience in establishing secure Data Analytics capabilities which provide accurate and timely data at the point of need. We will support you to establish the culture and data literacy within your organisation to ensure data insight is maximised in a secure and controlled manner.

mea:connexus®

Mea: Connexus is a **SECURE VIDEO INTERVIEW PLATFORM** that fully encrypts your data during the interview or meeting, as well as when the content is stored. Using Blockchain technology to ensure the content of your interviews or meetings cannot be changed without you knowing.

mea:message®

Mea: Message is a **FULLY ENCRYPTED CORPORATE MESSAGING TOOL** that allows your workforce to share messages, documents, photos, audio messages, calendars and geo-location while you maintain full ownership of all your data which is stored in your own corporate secure cloud storage.

mea:fuse®

Mea: Fuse is a **SECURE DIGITAL MEDIA UPLOAD APPLICATION** that allows you to capture and secure any digital media including video, audio, images, web pages, phone downloads and social media feeds immediately, providing a Blockchain-enabled immutable record of any digital media that you can prove hasn't been tampered with.
