

Secure, Private Corporate Messaging Under Your Control

Would you have a confidential conversation in public?

Would you share your address book with people you don't know?

Would you sell your corporate conversation content to other companies?

Would you make your corporate sensitive information easy to access and share?

No? Then why not ensure the security of your corporate messaging...

Instant messaging is a **time-efficient and effective way** of maintaining collaborative working and information sharing across geographically dispersed teams. But it can come with **risks...**

Most instant messaging apps pass your data through **unknown and uncontrolled** points; can you really say what is happening with your data and what it might be used for? Mea: Message not only uses **secure 256-bit AES encryption** to protect your messages when they are sent and received, but it also stores your messages and information in **your own corporate secure cloud storage** that you - and only you - hold the encryption key for. Mea: Message also allows you to share documents, audio messages, videos, photos, geo-location and calendars with **individuals or groups**, ensuring that collaboration is **fast and easy** while you maintain ownership of your data.

Secure, Private Corporate Messaging Under Your Control

Why use Mea: Message?

01

Secure, Private Instant Messaging

From text and audio messages to documents and photos, employees can share any information instantly, privately and securely. Whether in the office or remotely, all workers are connected, updated and resolve issues in a few messages.

02

Your Messaging, Your Data, Your Choice

Mea: Message gives you the choice of where you want to store and control your data. Your own cloud infrastructure? On-premise? Or do you want your own cloud instance of Mea: Message? It's entirely your choice.

03

Enhanced Control & Communication

Mea: Message allows you full control of your communications including tracking collaboration with a management dashboard, organisational and group broadcasting of instant messages and using priority messages and special alerts to draw attention to critical information in real-time.

04

Reduced Information Risk

Mea: Message provides closed corporate instant messaging which means you circumvent the risk of adware, spyware, worms and trojans other messaging apps are often subjected to. In addition, employees are less likely to disseminate sensitive information outside of your organisation.

05

Complete Security

Using a unique encryption key system, the encryption keys are handed to your organisation, and from then on, no one has access to your data except you. Additionally, we allow enterprises to have multiple holders of encryption keys to minimise the risk of a data leak. To support this, Mea: Message is NIST Compliant.

06

Increased Confidence in Communication

Mea: Message is 100% GDPR compliant and provides the capability to allow you to know when, what and to whom all conversations have been sent. All messages are time stamped and come with proof of receipt. We even provide the ability to send self-destructing messages for more sensitive content.
